

FAISAL ALI-ADEBAMBO

Full-Stack Software Engineer (.NET & Mobile)

Ikorodu, Lagos, Nigeria | oluwabori2004@gmail.com | +234 901 556 8686 | linkedin.com/in/faisal-ali-adebambo-2a0263272

PROFESSIONAL SUMMARY

Full-stack software engineer with over four years of experience building web, mobile and API solutions with C#, ASP.NET Core and Flutter. Built and maintained six consumer mobile apps and the shared .NET backend that serves them, delivered AI-powered SaaS products, and supported the payment and membership systems behind a suite of more than 20 software products. Experienced across the full lifecycle, from database design and API development to mobile releases on Google Play and the App Store.

PROFESSIONAL EXPERIENCE

Software Developer · Teknikforce

Feb 2025 – Aug 2026

Mobile Applications & Backend

- Developed and maintained six consumer mobile apps: Gymertia (AI fitness coaching), Eatona (AI nutrition tracking), Udharu (credit and lending tracker), Wemia (women's health and cycle tracking) and AllCalcs (2,000+ calculators) in Flutter, and Kundli (Vedic astrology) in .NET MAUI.
- Designed and built a .NET 10 backend that serves all six apps from a single deployment, with each app as an independent module with its own database, authentication and API.
- Built an admin portal and usage-tracking system to monitor installs, sign-ups and feature usage across the apps.
- Implemented offline-first storage with background sync, push notifications, payment reminders and data export in the Udharu app.
- Integrated OpenAI models to power features such as food recognition from photos and menus, personalised workout plans and AI chat assistants.
- Implemented in-app purchases, subscriptions, AdMob advertising, Firebase notifications and analytics, and managed Android and iOS releases.
- Resolved production issues affecting session persistence and database stability on the live API.

AI SaaS Products

- Built Explaineroo, an AI explainer-video generator, as sole developer: a .NET MAUI Blazor desktop app and ASP.NET Core API that turn a script into a finished animated video using OpenAI, Gemini, ElevenLabs and Replicate.
- Developed campaign management, call records, lead calling, team access and reseller features for Callsi, an AI voice-calling platform built on Blazor, Twilio and OpenAI.
- Built an AI voice-cleaning feature for Voisi that removes background noise from uploaded audio through Replicate, processed as background jobs.
- Built a website finder and contact-enrichment tool for Postfluence, and added AI-generated email templates.
- Added AI image generation and search to SellitPics, and moved file storage to AWS S3 with IAM access control.

Sales & Membership Platform

- Built and maintained the sales and member sites for 20+ SaaS products, including funnel builders and video marketing, social automation, email marketing, SEO and generative AI tools.
- Improved payment webhook handling for JVZoo and PayKickStart across 10+ product sites with transaction logging, rebill-cancellation handling and error reporting.
- Built OneMembership, a single premium membership portal that grants access to 20+ products, and the company's customer portal and product admin.
- Modernized legacy .NET code for better performance and stability.

Software Developer · Codeweb Solutions

Jul 2022 – Jan 2025

- Built a full School Management System (Codeweb Portal) on ASP.NET MVC and Entity Framework Core.
- Designed and built secure REST APIs for frontend and third-party integrations.
- Integrated external services into existing client applications.

- Built responsive interfaces with Bootstrap and Tailwind CSS.
- Worked directly with project leads and clients to meet delivery deadlines.

CURRENT PROJECTS

Boridesk · **Founder and developer, multi-client helpdesk for support agencies** 2026 – Present

- Building a multi-tenant helpdesk for outsourced support agencies, with a separate workspace per client brand and flat-rate pricing instead of per-agent, on ASP.NET Core and SQL Server.

NavAssist · **Freelance, audio navigation app for the visually impaired** 2026

- Built an Android app in Flutter that detects obstacles in real time with an on-device YOLOv8 model and announces them by voice, with GPS tracking and spoken turn-by-turn directions from an ASP.NET Core API.

TECHNICAL SKILLS

Languages: C#, Dart, SQL, JavaScript, HTML, CSS

Backend: ASP.NET Core, ASP.NET MVC, Web API, RESTful API design, Clean Architecture, payment webhooks

Mobile & Frontend: Flutter, .NET MAUI, Blazor, Razor, Bootstrap, Tailwind CSS

Databases: MySQL, SQL Server, PostgreSQL, SQLite, Dapper, Entity Framework Core

AI: OpenAI, Google Gemini, ElevenLabs, Replicate, Twilio, TensorFlow Lite

Cloud & Tools: AWS S3, AWS IAM, Firebase, AdMob, Git, GitHub, Google Play and App Store publishing

EDUCATION & CERTIFICATION

B.Sc. Computer Science, National Open University of Nigeria (NOUN) — 2024 – Present

Software Engineering Certificate, ALX Africa — 2023 – 2024
